Implementation report

For project

Skjøtselsavtale 2019 - Roman Gramsz - Skjøtselstiltak på slåttemarka i Bleikøya naturreservat og i Heggholmen naturreservat- Oslo.

Bleikøya

This year's work was aimed at selective cutting of trees, bushes and shrubs on the slope of the hill near the pond and the clearing of Mjørdurt *Filipendula ulmaria* around the pond. Cut out and mowed material was partially dried, raked and deposited on a heap and burned.

Bleikøya Nature Reserve. Wet meadow with already cut Mjørdurt and bushy slope after cutting down most of the trees and bushes. 20.09.2019.

The following map and photographs illustrate the work done.

Map 1. Bleikøya.

- Area marked yellow – Mjødur *Filipendula ulmaria*, grass and shoots of bushes were mowed.

- Area marked red – selective cutting of trees and bushes. *Fraxinus excelsior*, *Acer platanoides*, *Pinus silvestris*, *Populus tremula*, *Rosa sp.*, *Viburnum opulus* were removed. Asal *Sorbus sp. div.*, and Buskfuru *Pinus mugho** were not cut out.

- Point marked red – place for burning biomass.

* Buskfuru *Pinus mugho* was planned to be cut as a foreign species. It turned out that the whole large claw is one strongly grown old individual with the values of a nature monument. In addition, the owner of the land and the Bleikøya inhabitants wished not to cut it.
