

## **2. Bakgrunn (data)**

### **2.1. Latinsk navn (Latin name)**

*Drymocallis rupestris* (L.) Soják

### **2.2 Rødlistestatus (redlist status)**

(Critically endangered)

### **2.3 Utbredelse (spreading/place)**

*Drymocallis rupestris* occurs in Central and South-Eastern Europe, including Scandinavia, Balkan peninsula, Northern Italy, Sardinia, Corsica, British Isles. It does not exist on other islands and near the Atlantic. Moreover, it occurs in Asia Minor, trans-Caucasia and North Africa.

### **2.4 Lokalteter i Norge (locations in Norway)**

#### **2.4.1. Lokalteter i Oslo (locations in Oslo)**

1 known

**Location:** 1. OSLO

**Individuals:** 21 (Leave rosette was treated as individual)

**Area:** 2 m x 1.5 m (potential area 3 m x 15 m)

#### **Environment (habitat):**

SSE hill slope, too strongly shaded by old and young trees (ash – *Fraxinus excelsior*, elm – *Ulmus* sp., maple – *Acer platanoides*). It grows in fringe association with *Geranium sanguineum* (plant community) which is typical in Central Europe. Its occurrence along the edges of shrub or tree stands is also typical: neighbourhood of trees and shrubs gives some shade and protection from mowing and grazing. With other species: *Geranium sanguineum*, *Campanula trachelium*, *Campanula persicifolia*, *Filipendula vulgaris*, *Convallaria majalis*, *Polygonatum odoratum*, *Rosa* sp., *Trifolium medium*, *Geum urbanum*, *Anthriscus sylvatica*, *Veronica chamaedrys*, *Festuca* sp.

**Condition:** In 4 clusters, 3 of them with flowering plants (total: six flowering individuals)

**Care:** The site needs a little clearing – three closest ashes (*Fraxinus*) on the southern site should be cut out. Could be done gradually.

**GPS-koordinater:** Løvåsveien?

**Date of watch:** 30.06.2008
